

The following is part of the result of more than three years research. As the result of my fight with criminals and because of the free information that I have shared and I am sharing to counteract psyops and to prevent disinformation by globalists I am being prevented from locating jobs.

If you find this information helpful please consider donating both to the cause and for my work via my site at:

<http://www.geoengineeringlawsuit.ca>

If you are donating to my work please add a note stating so when you are donating however if you are donating to the cause you do not need to add any note. This lawsuit will be CLOSED on December 10, 2014 if we cannot fund \$5000 by December 9, 2014. Please feel free to distribute this article only if free of charge and without any manipulation of the content.

HAARP

The following is only some part of capabilities of Tesla Transmitters, HAARP, NEXRAD known to us.

They can create:

- ❖ Floods or droughts;
- ❖ Earthquake,

They can be used to:

- ❖ Mass Mind control of an entire population or just an individual at any distance on earth
- ❖ Military communications
- ❖ Surveillance
- ❖ Find deep underground deposits of natural resources and so on.

Nano particles added to the atmosphere will be ionized (<http://en.wikipedia.org/wiki/Ionization>) by either the sun's ray or by the ELF or EMF waves pointed at these particles via HAARP ... Then it will create what they call Cloud Condensation Nuclei (CCN)

(http://www.weatherquestions.com/What_are_condensation_nuclei.htm)

Basically it turns the nano particles to a charged plasma so they can be either used as CCN to create floods or if they do heat up the particles via HAARP then they can create droughts. So most of the droughts and floods are man-made and are being done through this process I explained.

However the issue is that only one time use of HAARP to manipulate the ionosphere will and have created an effect explained and called by Dr. Rosalie Bertell, the "Trigger Effect" which no one will be able to stop. The following is a quote from the article below:

"Moreover, the effects of this know-how (as published) cannot be controlled, some researchers say. Even a single use of this weapon [HAARP] may result in so-called trigger effect which no one will be able to stop: Earthquakes, sudden cooling on the global scale, etc. In the opinion of Canadian scientist Rosalie Bertel, who is studying the effects of wars on the environment, intense disturbance of ionosphere may result in a release of huge masses of free electrons – so-called electron showers. For its part, this might result in the change of electric potential of the poles and ensuing shift of the magnetic pole of the Earth. Simply speaking, the planet will capsize. So the location of the north pole will become uncertain. "

CO2, Methane, Global Warming

First of all nobody denies that CO2 and Methane can contribute to global warming. In fact Methane is a much stronger green house gas than CO2. However the amount of CO2 and Methane in the atmosphere and their contribution to the global warming is so slim that cannot be considered as a major cause for the global warming.

CO2 is responsible for only 3.618% of greenhouse effect. Methane is only responsible for 0.360% of greenhouse effect.

Water vapor is the most dominant element in causing green house effect! and is responsible for 95% of the greenhouse effect.

Role of Atmospheric Greenhouse Gases (man-made and natural) as a % of Relative Contribution to the "Greenhouse Effect"

Based on concentrations (ppb) adjusted for heat retention characteristics	Percent of Total	Percent of Total --adjusted for water vapor
Water vapor	-----	95.000%
Carbon Dioxide (CO2)	72.369%	3.618%
Methane (CH4)	7.100%	0.360%
Nitrous oxide (N2O)	19.000%	0.950%
CFC's (and other misc. gases)	1.432%	0.072%
Total	100.000%	100.000%

Anthropogenic contribution to the greenhouse effect by all gases in total is only 0.28%!

Anthropogenic (man-made) Contribution to the "Greenhouse Effect," expressed as % of Total (water vapor INCLUDED)

Based on concentrations (ppb) adjusted for heat retention characteristics	% of Greenhouse Effect	% Natural	% Man-made
Water vapor	95.000%	94.999%	0.001%
Carbon Dioxide (CO ₂)	3.618%	3.502%	0.117%
Methane (CH ₄)	0.360%	0.294%	0.066%
Nitrous Oxide (N ₂ O)	0.950%	0.903%	0.047%
Misc. gases (CFC's, etc.)	0.072%	0.025%	0.047%
Total	100.00%	99.72	0.28%

See http://www.geocraft.com/WVFossils/greenhouse_data.html

Furthermore global warming has been paused for the last 18 years and this has even been acknowledged by the IPCC. See

IPCC Railroad engineer Pachauri acknowledges 'No warming for 17 years':

<http://wattsupwiththat.com/2013/02/22/ipcc-railroad-engineer-pachauri-acknowledges-no-warming-for-17-years/>

watch the entire presentation by Dr. Tim Ball who is a Canadian Geologist explaining it all here:

<https://www.youtube.com/watch?v=tPzpPXuASY8>

As for why CO₂ is being falsely introduced as the cause of manmade global warming is because, They want to hold human responsible for global warming and then ask the governments to add **Carbon Tax!!** and also they want to use the "**Cap and Trade system**" to steal money from other countries. See http://en.wikipedia.org/wiki/Emissions_trading

and finally they want to **finance** their New World Order plan with these stolen money gathered via these methods!!

One more thing I would like to add is that the Sun has gone into hibernation and NASA has acknowledged this. Sun controls the climate on earth not CO₂!! The following graph is the count of sun spots on the Sun which is getting lower. It means Sun is going to sleep mode. Therefore global warming can NOT exist when the sun is in hibernation!

See: http://solarscience.msfc.nasa.gov/images/ssn_predict_l.gif

also see this:

<http://solarscience.msfc.nasa.gov/predict.shtml>

CO2 does NOT drive the climate rather CO2 is caused by warming. If the weather is warm the ocean surface will release CO2 and the amount of CO2 can go up and human also contribute to the amount of CO2 by burning fossil fuels. There has been times that the amount of CO2 in the atmosphere has gone up but we have had cooling in the climate. For this please see Dr. Easterbrook's presentation before the US Senate at:

Dr Don Easterbrook Exposes Climate Change Hoax

<http://www.youtube.com/watch?v=4LkMweOVOOI&feature=share>

I highly recommend you to go through my posts in my campaign page at:

<https://www.facebook.com/GeoengineeringLawsuit/>

and my site at: <http://www.geoengineeringlawsuit.ca/>

In regards to IPCC please note that IPCC is a political organization and Mr. John Casey, former White House space program adviser, consultant to NASA Headquarters, and space shuttle engineer, has made an assessment of their 5th report on climate change rendering it a FRAUDULENT report. See:

Mr. John Casey's Assessment of IPCC report:

<http://www.spaceandscience.net/sitebuildercontent/sitebuilderfiles/unipccar5summaryforpolicymakersssrcopinion.pdf>

BTW do you know how much is the Cap and Trade SCAM?

\$10 Trillion / year!!!!

<http://www.glennbeck.com/content/articles/article/198/39670/>

Chemtrails, Geoengineering and Aerosols

How they affect the climate

The impact of aerosol in weather depends on three parameters:

- 1-Component of the aerosol
- 2-Size of the aerosol
- 3-Height at which the aerosol is being sprayed

If aerosol is water vapor just like normal clouds or contrails ~~and or if it is Carbon Black~~ then surely it will have warming effect in the weather if it is persistent for a long period of time then in the climate because ~~both of these~~ normal cloud absorb the sun's ray and heat up the atmosphere and trap the heat causing

There are conflicting ideas in regards to Carbon black. Some say it will warm the weather, some say smaller size carbon black will cool in some places and it will warm in other places. From what I read and considering the effect of the aerosol size on warming or cooling of the weather I would agree that smaller size carbon black will have cooling effect in most areas just like other aerosols.

Read last paragraph on page 41 and then page 42 and 43 of "STRATOSPHERIC GEOENGINEERING WITH BLACK CARBON AEROSOLS" by "BENJAMIN S. KRAVITZ" [https://rucore.libraries.rutgers.edu/rutgers-lib/33892/PDF/1/Ramanathan et al](https://rucore.libraries.rutgers.edu/rutgers-lib/33892/PDF/1/Ramanathan%20et%20al)

<http://www-ramanathan.ucsd.edu/files/pr106.pdf> quote: "Absorbing aerosols such as black carbon can even change the sign of the forcing from negative (cooling) to positive (warming)[e.g., Haywood and Shine, 1997; Heintzenberg et al., 1997; Liao and Seinfeld, 1998; ...]"

Also read: Can the direct and semi-direct aerosol effect compete with the indirect effect on a global scale?
<http://www.iac.ethz.ch/doc/publications/Semi-direct-effect.pdf>

warming.

Before I go to the next discussion I would like to add that if there is nothing in the air and we have a clear sky then 100% of the sun's ray reach the earth's surface.

If we add certain particles which I will discuss later in this article then less than 100% sun's ray will reach the earth's surface therefore having cooling effect. This is a common sense and does not need one to be a scientist to understand it.

Now back to my discussion if we replace the water vapor and carbon black with certain metallic particles three things may happen:

- 1-Aerosol may reflect back the sun's ray to the sky
- 2-Aerosol may absorb some of the sun's ray
- 3-Aerosol may or may not have any effect's in longwave or infrared

So as you can see component is very important.

Now let's go to the size of the particles. This is the rule, the smaller is the particle size the higher is the cooling effect it will have.

The smaller sized particles will have no effect on long waves (the waves that are being reflected back from the earth surface to the space) and only will have effect on the short waves (the sun's ray). This is based on the studies that have been done and have been confirmed by Prof. Alan Robock. See also Philip J. Rasch et al "Exploring the geoengineering of climate using stratospheric sulfate aerosols: The role of particle size" at:

www.climateknowledge.org/figures/Rood_Climate_Change_AOSS480_Documents/Rasch_Sulfate_Size_GRL_2008.pdf

One quote from the study above states: "When the particles are small they primarily scatter in the solar part of the energy spectrum, and play no role in the longwave; when large they scatter and absorb in the solar wavelengths, but also absorb in the infrared?"

but as you are aware chemtrails and geoengineering mostly contain nano sized Aluminum, barium, strontium, sulfuric acid etc. So it is perfectly safe to agree that these aerosols will have cooling effect in most cases.

So conclusion is that nano sized particles will have more cooling effect than bigger sized particles.

Now it is common sense that if the height of aerosol being sprayed in the sky is lower then more of the sun's ray will reach the ambient above the aerosol within the earth's atmosphere and if the height is higher less of it will reach that area. So this means the lower is the height of the aerosol the LESS cooling effect it will have because more warm air is present in the ambient above the aerosol within the earth's atmosphere and the higher is the aerosol the MORE cooling effect it will have.
